What is it?

- **MRR leverages off the USMC "Marine Corps Equipment Readiness Information Tool (MERIT)", providing a similar "MUNITIONS" readiness snapshot and drill down capability.**
- **The site is established under the authority derived from "Marine Corps Order 4000 - Marine Corps Total Life Cycle Management" which assigns the Program Manager, Ammunition (PM Ammo) of the Marine Corps Systems Command, program management functions of effective acquisition and sustainment throughout the munitions lifecycle, as well as those Class V(W) Inventory Control Point (ICP) functions normally assigned to Marine Corps Logistics Command.**
- **This readiness site serves to address the requirements established by Department of Defense Directive (DODD) 7730.65 - DOD Readiness Reporting System as well as compliancy with Sustaining Action 1.1.20 of PM Ammo's FY10-FY14 Strategic Plan.**

What does it do?

- **MRR is the key metric for USMC Conventional Ammunition readiness. Readiness is the universal measure of the preparedness of an organizational entity. As such, MRR provides a total view of the Marine Corps Class V(W) Readiness posture by comparing the available inventory against the most likely annual training expenditures and modeled war reserve requirements. The training requirement is more realistic since it was computed as the highest annual expenditure per item over the last five years vs. the unconstrained training requirement.**
- **Most importantly, MRR supports PM Ammo, our Marine Force Commanders, Supporting establishment, and Higher Headquarters with clear visibility of Class V(W) readiness.**

Individual Item Query

(Example – Posture of DODIC A363,
9mm ball ammo for the M-9 pistol)

The same type of data is available for prepositioning programs.

Summary

- MRR data is updated monthly and provides a “snapshot” readiness view of all Marine Corps Class V(W) munitions
- It was designed as a tool to assist Commanders at all levels.
- Questions/comments can be sent to ammomail@usmc.mil
